END-OF-TEST REPORT

PLAYER JOURNEY MAP & MATCH ANALYTICS

Prepared by: Namratha **For:** Lila Black Gaming

PROJECT SNAPSHOT

89,104	1,242	796	339
Recorded events	Player journeys	Matches	Unique players

Data period: 2026-02-10 to 2026-02-14 • **Maps:** Ambrose Valley, Grand Rift, Lockdown • **Source files represented:** 1,243

WHAT WAS REVIEWED

Feature	Review summary
Map & coordinates	Map-specific world-to-minimap transforms are configured for all three maps; X/Z positions are used for 2D plotting.
Match & player selection	Time-period, map, match and player filters are implemented in the interface.
Gameplay signals	Player movement, kills, deaths, storm deaths and loot are represented in the telemetry/visualization.
Playback & exploration	Timeline playback, map navigation, zoom/pan and signal-layer controls are included.

TEST / REVIEW OUTCOME

Check	Outcome
JavaScript syntax — app.js	**Passed** — syntax check completed without errors.
Generated telemetry artifact — analysis.js	**Passed** — syntax check completed; embedded dataset JSON was readable.
Automated functional test suite	No dedicated test/spec files were found in the supplied project archive.
End-to-end browser behaviour	Not independently verified in a live browser as part of this file review.

KNOWN LIMITATION

Performance: Project notes identify that the map may feel sluggish when multiple signal layers are enabled together. This should be checked during browser-based validation, particularly with broad match selections.

FINAL RECOMMENDATION

The supplied project files and generated dataset are structured for the intended player-journey visualization, and the JavaScript syntax checks passed. **Recommended status: Ready for functional review, with final release sign-off pending browser validation** of coordinate placement, filters, match-specific data, event layers and performance. Formal test counts and pass rates are not stated because no recorded test execution log was included.
